

# Digitrainer for Education

## What is the future for our students?

We can only imagine what changes there will be in our working lives. Even now there are so many jobs and professions that we are not aware of, but what will it be like in the future? What professions will there be? What kind of skills will be needed? How can you educate and train students? Are reading, writing, maths and other skills enough? Do we have to develop the skills of coding and new business creation? How should we educate the next generation? Nonetheless, the move towards a more digitalised economy is part of our lives, and this represents a challenge for our education systems.

## Our vision

One thing we know for sure is that students and pupils will require more and more skills to be able to cope in a changing world. In addition, they will, more than ever, need to take responsibility for their studies and their work. They will need to have the skills to seek new opportunities on the job market. They will need to be creative and active. Cooperation in studies and in the workplace will be more important than ever. These skills can be learned as well.

- It is all about developing an entrepreneurial mindset
- This is the key for successful individuals, schools and societies!

## Results

### FOR STUDENTS

- learn how to set goals and take responsibility for their work – better school results
- are more active and more cooperative
- develop their self-esteem
- become more motivated
- are given guidance on career choices and future studies
- take action in developing new concrete business ideas

### TEACHERS AND HEADTEACHERS

- teach specific entrepreneurial skills
- develop students' learning skills
- get better results by using this solution
- use new pedagogy and digital solutions
- motivate students in their studies and their career choices
- make learning motivating and fun!

### SCHOOL

- entrepreneurial, innovative and motivating learning culture is strengthened
- new digital solutions are used in a meaningful way, enhancing student's personal and academic development
- gain a leading profile by using latest digital pedagogy
- is a forerunner among education institutions focusing on research-based pedagogical development

## Our solution

Digitrainer for Education develops students' entrepreneurial mindset. The digital tool is a personal trainer for students. It is a concrete pedagogical and virtual activating material for teachers and schools.

Digitrainer for Education empowers students' achievements in school and in their personal lives. It also guides students towards working life and helps them develop new businesses. The digital solution enhances interaction in school.

## How does it work?

### FOR STUDENT

- Registration
- Students receive a link for self-evaluation
- Students answer for a school and complete a self-evaluation questionnaire
- Immediate personal feedback
- Personal recommendations for future activities
- Concrete and different voluntary tasks for the next few weeks
- Rewards

### FOR TEACHERS, HEADTEACHERS AND OTHER SCHOOL STAFF

- Registration
- Visible picture of school's and students' self-evaluation and processes in action
- Opportunity to set tasks to activate groups and school community
- Use of IDEA BOOKLET - concrete pedagogical ideas on how to use Digitrainer in the classroom and in student counselling

## Our expertise

**Finland** is a country well-known for its expertise in educational development. The Digitrainer for Education was developed in cooperation with several Finnish universities and research groups.

Moreover, our current Finnish project Digitreenari, [www.digitreenari.fi](http://www.digitreenari.fi), has got both students and teachers involved in Digitrainer. They have given feedback and ideas for our development. In our opinion these are the best consultants on this project because they come from real, daily school life.

Digitrainer for Education presents an up-to-date idea of educational and pedagogical development in which various participants take action and provide their expertise. This ensures the meaningful development of education.

*Would you like to use this solution  
in your school or community?*
